

The Pregnancy, Infection, and Nutrition (PIN) Study – PIN 1 and 2

MAIN QUESTIONNAIRE DOCUMENTATION

There are multiple data sets associated with the Main Q because of different file formats (multiple obs per woman, confidential address information, section added for PIN2 only). See the **table of contents** on the next page for clarification about the questionnaire sections and the associated data sets.

General coding rules are described in the General Coding Documentation. Please refer to a copy of the Main Q for additional printed response codes.

The **variable names** were constructed to identify the source instrument (MQ in this case), then the question number (A1 for section A, question 1). In cases where there was more than one variable for the question, the convention was to use A, B, C..., or AA, AB, BA, BB (see question MQB3AA as an example).

While an attempt has been made to capture the **skip patterns** in this documentation, please refer to the Main Q for a more thorough understanding of these logic paths.
