

The Pregnancy, Infection, and Nutrition (PIN) Study

FOLLOW-UP AFTER-DELIVERY QUESTIONNAIRE DOCUMENTATION

The following documentation is an annotated listing of variables, their labels in SAS, and comments that include some of the response categories that appear in the Follow-up After-Delivery Questionnaire along with the special codes that were established based on the CPC data support staff coding decisions. Some of these codes will continue to expand as new responses are reported. See the **table of contents** for clarification about the questionnaire sections.

General coding rules are described on the next page. Please refer to a copy of the Follow-up After-Delivery Q for additional printed response codes.

The **variable names** were constructed to identify the source instrument (FD in this case), then the question number (A1 for section A, question 1). In cases where there was more than one variable for the question, the convention was to use A, B, C..., or AA, AB, BA, BB.. (see question FDB4A as an example).

While an attempt has been made to capture the **skip patterns** in this documentation, please refer to the Follow-up After-Delivery Q for a more thorough picture of these logic paths.

This documentation represents the preliminary master data sets for the Q. We expect to modify the data sets and/or the documentation to include some of the following:

1. A modification of the variable lengths to reduce the storage space required for these data sets.
2. Construction of SAS dates when there are month/day/year variables.
3. Construction of century months when there are month/year variables.
4. Conversion of missing data codes (e.g., 97, 98, 99) to distinguishable "dot" missing values in SAS.
5. As constructed variables are agreed upon by the research team, they will be added to this data set, along with the associated programming code.

All of these items will be documented in updated versions of this documentation as they are implemented.

General Coding Rules

- 9 - A code of "9" or filling the variable field with nines ("99" for a variable of length 2) denotes a missing value or error. Use this code to show that there was no response for a question that should have been answered (a missing value) or there were multiple responses marked for one question (an error).
- 8 - A code of "8" or filling the variable field with "9's" ending with an eight ("9998" for a variable of length 4) denotes that the subject answered the question with "Don't know" or in certain cases refused to answer the question.
- 7 - A code of "7" or filling the variable field with 9's ending with a seven ("997" for a variable of length 3) denotes that the question was intended to be skipped because it was not applicable in the interview, was marked "NA," or had a line crossing it out.

Special Codes

- 96 - Refused. Never used as a code for a single digit field unless it is a valid response. In single digit fields "refused" is coded as "8" unless it is used as a response option for "Refused" (as in the AIDS section).
- 95 - "All my life", "when I was in school", "many" or any response that indicates a non-specific, long span of time or non-specific, large amount. In questions MQ.E8 through MQ.E15 "5+" should be coded 95. Never use code for a single digit field.
- 94 - "Not long", "when I was in elementary school", "a few" or any response that indicates a relatively short amount of time or small amount. Never use code for a single digit field.
- 93 - A number larger than field will allow. Actual number documented in codebook with its PATID. Never use code for a single digit field.
- 92 - Indeterminate amount. (In Specimen collection documentation form.) Never use code for a single digit field.
- 91 - Never use code for a single digit field.

Responses given in ranges

The midpoint is taken and rounded, if necessary, to fit into the field.

PIN Study Follow-up After-Delivery Questionnaire Documentation Table of Contents

Q section	Data set name	Beginning page in this documentation
A. Preliminary information and introduction to the study	PFD_nnn	1
B. Current pregnancy information (infections, HIV/AIDS, breastfeeding practices)	PFD_nnn	1
C. Health behaviors (smoking, alcohol, drugs)	PFD_nnn	14
D. Sexual behavior during pregnancy, advice about sex during pregnancy	PFD_nnn	20
E. Employment changes	PFD_nnn	24
F. Physical activity	PFD_nnn	28
G. Subject's self assessment	PFD_nnn	29
H. Interviewer assessment of the interview	PFD_nnn	29

Data Set Name: PFUDELIV

Note: All variables are numeric variables unless otherwise noted in the comment field.
